No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Sequence 18, Sequence 18, Sequence 26, Sequence 26, Sequence 28, Sequence 28,

New human anti-MUC18 monoclonal antibodies, useful for treating a disease or condition associated with expression of MUC18 in a patient, e.g. tumors, cancers, and other malignancies.

Claim 3; SEQ ID NO 22; 78pp; English.

The invention relates to a novel isolated monoclonal antibody comprising a heavy or light chain amino acid or a heavy or light chain variable domain where the antibody binds to MUC18. The monoclonal antibody of the invention demonstrates cytostatic activity and may be useful for treating a disease or condition associated with the expression of MUC18 on the pancreatic or colorectal tumours, specifically melanoma, oesophageal, pancreatic or colorectal tumours, carcinomas, particularly cervical carcinomas and centers including colorectal, breast or lung cancer, as well as other malignancies. The current sequence is that of the anti-human MUC18 monoclonal antibody

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                The invention relates to a novel monoclonal antibody used for inhibiting tumour growth in an animal. The tumour inhibition process comprises selecting an animal in need of treatment for a tumour, providing a monoclonal antibody comprising a heavy chain amino acid, where the antibody consists of any one of 10 fully defined sequences of 117-123 amino acids given in the specification, and where the monoclonal antibody binds MUC18, and contacting the tumour with the antibody resulting in inhibited proliferation of the cells. The monoclonal antibody has orytestatic and can be used in the production of a vaccine. The monoclonal antibodies against the MUC18 antigen are useful for diagnosing and treating tumours, inhibiting tumour growth (e.g. melanoma, lung tumour or tumour metastasis), inhibiting cell invasion associated with melanoma, or increasing survival of an animal having a metastatic tumour. This sequence represents an anti-MUC18 antibody light chain, variable region,

The method involves administering anti-MUC18 monoclonal antibody. The method of the invention is useful for inhibiting cell (e.g. melanome or tumour cell) proliferation associated with the expression of MUC18 tumour antigen, the method is preferably useful for inhibiting tumour metastasis. The method carcinomas, cancer and other malignancies. The present amino acid sequence represents a light chain from an MUC18 tumour antigen-specific
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

This invention relates to a novel method of determining the ability of an immunoglobulin single domain to bind to a target in an intracellular environment comprising assessing the intracellular interaction between the immunoglobulin domain and the target by monitoring the signal. The method comprises providing a first molecule and a second molecule, where stable interaction of the first molecule and a second molecule, where generation of a signal, providing a single minracellular immunoglobulin domains, which is associated with the first molecule, where the single communoglobulin domain is free of complementary immunoglobulin domains, providing an intracellular target which is associated with the second molecules and carget leads to stable interaction of the immunoglobulin domain and the first and second molecules and generation of the signal; and assessing the intracellular interaction between the immunoglobulin domain and the target by monitoring the signal. The methods are useful for determining the ability of an intracellular environment. The present sequence is that of a single chain variable fragment (scFV) protein which was used to illustrate the method of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   1 DIVMTOSPDSLAVSLGERATIICKSSQSILYSSNNKNYLGWYQQKPGQPPKLLIYWASTR

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Sequence is variable region of light chain of anti-exotoxin antibody with signal sequence. AAN804988 encodes the same sequence except that its signal peptide-encoding sequence contains an intron. See also AAN80495-N8049696, AAN80498 and AAN80941-2. (Updated on 25-MAR-2003 to correct PA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              21 DIVMTQSPDSLAVSLGERATINCKSSQSVLYSSNNKNYLAWYQQKPGQPPKLLIYWASTR 80

communicompetent host with an antibody lul produced by injecting the antibody, where the peptide comprises a human anti-1gM antibody fragment cantibody, where the peptide comprises a human anti-1gM antibody fragment capture included are given in the specification, or active fragments. Also included are given in the specification, or active fragments. Also included are stimulating remyelination of central nervous system (CRS) axons in a mammal (comprising administering a monoclonal antibody, or mixtures, monomers, active fragments, or recombinant calls included by their ability to bind structures and cells within the CRS, treating or preventing a monoclonal antibody or mixtures, monomers, active fragments, or recombinant antibodies derived from it, characterised by their ability to bind structures and cells within the CRS, treating or preventing a monoclonal antibody, or mixtures, monomers, active fragments, or recombinant antibodies derived from it, characterised by their ability to bind structures and cells within the CRS, treating or preventing a monoclonal antibody or mixtures, monomers, active fragments, or recombinant antibodies derived from it, characterised by their ability to bind structures and cells within the CRS, and to stringleter empellination of GRS axons in a mammal, and DNA sequence (or degenerate variant of it) which encodes an antibody (or a peptide analogue, hapten, or active fragment of it, where the DNA sequence consists of a sequence encoding an antil igh antibody, and seay for screening for the antibody an assay for screening for the antibody and assay for screening demyelination and or the antibody is used to treat or prevent a production and diseases of the CRS sunging the antibody is used to treat or prevent a certival termyelination and or simulate the proliferation of glial cells in CRS axons, or a disease, other injury or dysfunction of the CRS multiple sclerosis, or a disease, other injury or dysfunction of the compliant encephalancyality is a mouse infected with Strain by The FR 
                                       Human, antibody; IgM, remyelination, neuronal growth; autoantibody; demyelination disease; multiple sclerosis; central nervous system; CNS; axon; glial cell proliferation; theiler cell proliferation; Theiler companies of murine encephalomyelitis virus infection; CNS injury;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New human immunoglobulin M antibody for treating or preventing a demyelinating disease of the central nervous system in a human or domestic animal, such as multiple sclerosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                invention relates to an antibody (I) produced by injecting an
Human anti IgM antibody LYM 46 Vkappa protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Pease LR;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Claim 9; Fig 72; 159pp; English.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            The present invention relates to novel antibody sequences, which acts against lessioned tissue. Also claimed is a method (M1) for isolating polynucleotide encoding the antibodies, which involves (a) isolating B cells that is infiltrated into lesioned tissue, and (b) acquiring polynucleotide that encodes an antibody from the isolated B cells. The antibodies are useful for treating cancer lesions, arteriosclerosis, inflammatory disease or autolimmune disease. The present sequence was used
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Isolating polynucleotide that encodes antibody which acts against desioned tissue, involves isolating B cells that is infiltrated into lesioned tissue, and acquiring polynucleotide that encodes antibody from isolated B cells.
                                                                                                                                                                              9

Producing gene libraries and antibody libraries, involves selecting a
light chain that binds to a heavy chain product to produce a functional
formation, and producing a gene library of the light chain variable
                                                                                                                                                                                                                       Gene library; immunoglobulin; antibody library; human.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention relates to novel antibody sequences, which acts against lesioned tissue. Also claimed is a method (M1) for isolating polynucleotide encoding the antibodies, which involves (a) isolating B cells that is infiltrated into lesioned tissue, and (b) acquiring polynucleotide that encodes an antibody from the isolated B cells. The antibodies are useful for treating cancer lesions, arteriosclerosis, inflammatory disease or autoimmune disease. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Isolating polynucleotide that encodes antibody which acts against lesioned tissue, involves isolating B cells that is infiltrated into lesioned tissue, and acquiring polynucleotide that encodes antibody from

The invention relates to producing gene libraries, comprising immunoplobulin light and heavy variable region. The method involves selecting light chain that binds with the heavy chain product to produce a functional conformation, producing a gene library comprising a function of these light chain variable genes, and combining with gene library of heavy chain variable genes. The method is used for production of gene and antibody libraries
                                                                                                                                                                                                                                                                                                                     9

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         원
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ò
                                                                                                                                                                                                                                                                                                                            approximately 40kD. The protein is isolated from human acrtic tissue and binds immunoreactively with immunoglobulin purified from human abdominal acrtic aneurysm (AAA) tissue. The protein is referred to as acrtic aneurysm (AAA) tissue. The protein is referred to as acrtic aneurysm associated antigenic protein (AAAP). The protein is capable of forming a disulphide bonded dimer. The protein is immunoreactive with human kappa immunoglobulin. Also included in the invention are recombinantly produced human AAA proteins. AAAP shows regions of homology with the bovine microfibril associated glycoprotein MFAP-4 and also with fibrinogen and vironectin. The isolated microfibrillar protein is useful for alleviating abdominal acrtic aneurysm (AAA) disease and detecting the presence of AAA-associated immunoglobulin bound to the human acrtic tissue. Antibodies directed against AAAP can be used to detect AAA disease. The recombinant protein can be used to induce tolerance to aniemnoglobulin kappa2 amino acid sequence. The sequence represents an immunoglobulin kappa2 amino acid sequence. The sequence shares homology with the AAAP of the invention, it was used to identify and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                Isolated microfibrillar protein for alleviating abdominal aortic aneurysm disease is purified from human aortic tissue and binds immunoreactively

The invention relates to a method for treating a primary not of the invention comprises tolerance to at least one antigen. The method of the invention comprises administering at least one compound which when in a primary mixed lymphocyte reaction in vitro reduces the amount of CD4+ CD25+ cells produced. The preferred compound is a humanised antibody or its fragment, that does not bind to the FC receptor, and includes CD8s that are free of a glycosylation site. The method of the invention is useful for inducing colerance to at least one antigen, specifically for inhibiting, ameliorating or reducing an immune response to an antigen. The antibody is useful for manufacturing a medicament for inducing tolerance to an antigen (possibly in the form of a vaccine), for inhibiting an immune response, for inhibiting the rejection of a graft (such as an organ) in a human patient, and for treating an autoimmune disease. The current sequence represents the human antibody HSIGKAW light chain that was used in an example from the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        80
                                                                                                                                                                                                                                                                                                                                                                                                                                    Treating a primate to induce tolerance to at least one antigen, useful for inhibiting graft rejection or treating an autoimmune disease, comprises administering a TRX1 antibody to reduce the amount of CD4+
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    SEQ ID No:43.

The present invention relates to a process of treating a primate to induce tolerance to at least one antigen, which comprises administering to the primate at least one anti-CD4 antibody or its fragment in an initial dose of at least 40 mg/Kg and at least one compound that inhibits CD8+ T cells, where the anti-CD4 antibody or its fragment is present in the primate when the antigen is present in the primate. The method is useful in treating a primate to induce tolerance to at least one foreign antigen to prevent transplant rejection. The present sequence is an antibody fragment used in the exemplification of the invention.
                Treating a primate to induce tolerance to at least one antigen comprises administering at least one anti-CD4 antibody or its fragment in an initial dose of at least 40 mg/kg and at least one compound that inhibits
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Primate; tolerance; antigen; mixed lymphocyte reaction; MLR; CD4+; CD25+; IL-2; IL-4; IL-12; immune response; graft rejection; immunosuppressive; antirheumatic; antiarthritic; antidiabetic; neuroprotective; antiinflammatcry; antiallergic; antisthmatic; cytostatic; antimicrobial; transplant; graft-versus-host disease; autoimmune disease; inflammation; allergy; asthma; cancer; infection; human; HSIGKAW.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               ö
                                                                                                                                                                                                                                                                                                        present invention relates to the isolation of a protein approximately ba which is purified from human aortic tissue. The protein is
                                                                                                                                                                                                                                                                                                                  40kDa which is purified from human cortic tissue. The protein is immunoreactive with abdominal aortic tissue. The protein is immunoreactive with abdominal aortic aneurysms (AAA) -associated immunoglobulin. The protein is useful for diagnosing AAA disease in a subject, e.g. human, by administering the protein or a composition comprising the protein. The inventive protein is capable of forming a fluithinget-bonded dimer of 80 kDa. The present sequence of unknown function is given in the Sequence Listing but is not mentioned elsewhere in the specification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         80
                                                                                                                                                                                                                             Purified protein useful in diagnosing abdominal aortic aneurysm disease in subject, e.g. human, contains specified amino acids.

                           The invention relates to a novel method for treating a primate to induce to least one antigen. The method comprises administering a compound, or a combination of compounds, that induces tolerance against one or more antigens. The compound or the combination being in a primary mixed lymphocyte reaction being in a primary mixed lymphocyte reaction and that come or more antigens. The compound or the combination being in a primary mixed lymphocyte reaction and that can the primary mixed lymphocyte reaction and that reduces at least one of a primary and secondary mixed lymphocyte reactions, and the amount of a primary and secondary mixed lymphocyte reactions, and the amount of a primary and secondary mixed lymphocyte reaction.

The compound or the combination being administered in an amount and for a time so as to induce tolerance of administered in an amount and for a time so as to induce tolerance of administered in an amount and for a time so as to induce tolerance of antibody given in the specification, a composition comprising the relations of the thousands of antibody given in the specification, a composition comprising the relation of a present in the primate when the antigen of arriver; inducing tolerance to an antigen in a patient; inhibiting an immune response in a patient or for inhibiting the rejection of a graft in a human patient; and screening for a compound, or a combination of at least two compounds for use in inducing tolerance. The compositions of the invention have the following activities: immunosuppressive, antiinflammatory, antiathlargatic, and antidabetic, neuroprofective, antiinflammatory, antiathlargatic, antighted to mention of a careful for inhibiting or a meliorating or ameliorating or are useful for inhibiting, preventing or ameliorating an immune response or are useful for inhibiting, such as in the inhibiting or ameliorating an immune capense or miltections. These may also be used for antibod, and inflatence represents a uncommune diseases (e.g. antiphens. The nowed the sequescent or 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö

                                                                                                                                                                                                                                                          The present invention relates to novel antibody sequences, which acts against lesioned tissue. Also claimed is a method (M1) for isolating polynucleotide encoding the antibodies, which involves (a) isolating B cells that is infiltrated into lesioned tissue, and (b) acquiring polynucleotide that encodes an antibody from the isolated B cells. The antibodies are useful for treating cancer lesions, arteriosclerosis, inflammatory disease or autoimmune disease. The present sequence was used to illustrate the invention.

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          A; Note: the sequence was determined from the differentiated gene A; Note: the authors translated the codon TGC for residue 76 as Trp C; Complex: An immunoglobulin heterotetramer subunit consists of two identical light (kag hain disulfide bonds. In some cases, such as IgA and IgM, the subunits associate into la C; Superfamily: immunoglobulin V region; immunoglobulin homology

"Complete amino acid sequence of the variable domains of two human IgM anti-gamma globulins (Lay/Pom) with shared idiotypic specificities."; Scand. J. Immunol. 5:677-684(1976).

-! MRSCELLANBOUS: The second and thintd hypervariable regions of this chain are identical with those of the human PoW V-III kappa chain, with which it shares certain idiotypic determinants.

-! MSCELLANBOUS: This chain was isolated from an IgM with anti-gamma pIR; A01871; KIHULY.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Sequence 43, Application US/09535832A

Patent No. 6537769

GENERAL INFORMATION:

TITLE OF INVENTION: With Abdominal Antigenic Proteins Associated

TITLE OF INVENTION: With Abdominal Antigenic Proteins Associated

TITLE OF INVENTION: Diagnostic and Therapeutic use Thereof

TITLE OF INVENTION: Diagnostic and Therapeutic use Thereof

CURRENT APPLICATION NUMBER: US/09/535,832A

CURRENT PILING DATE: 2000-03-28

CURRENT FILE PATENTION ONS: 57

SOFTWARE: PatentIN Ver. 2.1
                                                                                                                                                                                             9
                                                                                                                                                                                                                                      80
